

Security Health Report

example.com

Sample report · demo data, not a real scan

Needs Improvement · 72/100

72 / 100

Your website has several basic security configurations that should be reviewed.

Security Check Summary

HTTPS	Secure	HTTPS is enabled
SSL Certificate	Valid	Certificate appears valid
HTTPS Redirect	Working	HTTP redirects to HTTPS
Security Headers	Needs Review	2 important security headers are missing
Cookie Security	Needs Review	Some cookie security attributes should be reviewed
DNS	Available	Basic DNS information available
Performance	Good	Basic page performance check completed

Issues Found (3)

HSTS Header Missing The Strict-Transport-Security header was not detected. Recommendation: Consider enabling HSTS to help browsers enforce HTTPS connections.	Medium
X-Content-Type-Options Missing The X-Content-Type-Options security header was not detected. Recommendation: Consider configuring this header to reduce MIME-type sniffing risks.	Low
Content Security Policy Review A Content-Security-Policy header was detected but appears permissive. Recommendation: Review whether the policy can be tightened to suit the website.	Medium

Security Headers

Header	Status
Strict-Transport-Security	Missing
Content-Security-Policy	Present
X-Content-Type-Options	Missing
X-Frame-Options	Present
Referrer-Policy	Present
Permissions-Policy	Present

Security headers help browsers apply additional security protections to web pages.

SSL Certificate

Domain	example.com
Issuer	Example Certificate Authority
Valid From	Jan 01, 2026
Valid Until	Jan 01, 2027
Days Remaining	102

Cookie Security

Secure	Present
HttpOnly	Present
SameSite	Review

DNS Information

A Record	93.184.216.34
AAAA	Available
MX	Available
Nameservers	ns1.example.com

Performance

Page Response	420 ms
Page Size	1.8 MB
Resources	34
Status	Good

Recommended Actions

- 01 Enable HSTS**
Help browsers enforce HTTPS connections.
- 02 Add X-Content-Type-Options**
Reduce the risk of MIME-type sniffing.
- 03 Review Content Security Policy**
Consider implementing an appropriate CSP for the website.

Security Summary

Your website has HTTPS and a valid SSL certificate, but several security headers should be reviewed. Addressing the detected configuration issues can improve the website's basic security posture.
